

Product Information

BTB Bus, Truck & Rail Kit

(15 blades)

■ **WKBTR15-BX BTB Bus, Truck & Rail Kit (15 blades)**

For the bus, truck, rail and commercial vehicle industries, this toolkit contains blades specifically suited to adhesive bonded glass and bonded panel removal on today's transport fleets.

Includes external and internal cutting blades, as well as the WK5-S blade and WK11DW5 control arm for backfill adhesive removal from between side glasses or between glass and panel.

Adjustable cutting depth control arms regulate cutting depth.

Bus, truck and rail glass removal often involves the need to cut wide and hard beads of adhesive. The same often occurs with marine glazing, construction glazing and other industry adhesive fitted glasses and panels. BTB's powerful air and battery operated power tools and cutting blade system are guaranteed to efficiently cut hard and wide adhesives, efficiently removing adhesive bonded glazing and body panels. However, you must apply correct cutting techniques for the most efficient cut-out, as demonstrated in this video.
